

An Overview on Collagen

What is collagen?

Collagen is the most abundant structural protein found in the human body, and it supports our cells, bones and connective tissues.¹ Compared to other proteins, collagen has a unique amino acid composition given its high content of glycine, proline and modified amino acid hydroxyproline.² There are 28 forms of collagen that have been discovered in the human body.¹ Each type provides unique structural support, contributing to functions such as maintaining strong, flexible resistance to force, tension, and stretch within a meshwork of cellular support.¹

Type I, II and III are the most abundant in the body, making up 80-90% of the human body's collagen.^{3,4,5} These types are the main components of the interstitial matrix,¹ a complex structure of the cells found in the connective tissues that make up and support our bones, ligaments, tendons, nerves, blood vessels, and skin.^{1,6} Other types of collagen play more minor, but vital, roles in the interstitial matrix. The table below further demonstrates where the different types of collagen support the human body⁵:

Body Location	Collagen Types Present
Cornea	I, V, VI
Heart Valve	I, III, IV
Skeletal Muscle	I, III, VI
Blood Vessels	I, III, IV
Skin	I, III, VI
Adipose Tissue	I, V, VI
Tendons & Ligaments	I, III, V
Bone	I, III, V
Temporomandibular Joint Disc	I, III, V
Auricular Cartilage	I, II, III
Costal Cartilage	II, IX, XI
Facet Joint Cartilage	II, IX, XI
Intervertebral Disc	I, II, III
Articular Cartilage	II, IX, XI
Knee Meniscus	I, II, III

Collagen plays a vital role in many functions in the body, including support for skin, hair, nail & joint health.^{*11,12,13,14,15,16,17}

Why is collagen supplementation beneficial?

Our bodies make collagen on their own throughout our lives, but our ability to produce this protein diminishes over the lifespan, starting as early as our 20s. Some studies suggest as much as a 1% decrease per year in collagen replenishment.¹²

This reduction in our natural production of collagen over time can reduce our skin's firmness and elasticity,^{12,13} make our bones, tendons & ligaments weaker^{17,18} and degrades cartilage, such as joint cartilage.¹⁹ These functional declines have implications in our bodies' skin, hair, nail and joint health.

Additional risk factors that accelerate the downturn in our natural collagen production include excessive alcohol use,²⁰ smoking,²¹ overexposure to the sun,²² and a diet high in ultra-processed foods with added sugars.²³

We can obtain collagen through our food intake. Dietary sources of collagen include tough cuts of meat that are full of connective tissue, bones and skin of fish, animal bone broth, and gelatin made by boiling bones cartilage and skin.²⁴ However, many individuals may not consume these foods regularly, so adding a collagen supplement to our daily regimen may help us continue to reap the benefits of collagen as we age.*

Is collagen a complete protein?

Collagen protein lacks one essential amino acid (tryptophan) and is therefore categorized as an incomplete protein source.

Why is hydrolyzed collagen important?

Dietary collagen is difficult to digest and not easily absorbed. Hydrolyzing collagen involves breaking up the proteins into more easily digested peptides, or chains of beneficial amino acids which is why you often see the terms hydrolyzed collagen and collagen peptides used interchangeably. This method ensures far greater bioavailability.²⁵

What are the potential benefits of collagen peptides?

Adding a collagen peptide supplement to your routine may offer the following benefits:*

- Enhances skin elasticity^{12,13†*}
- Promotes skin firmness^{12,13†*}
- Boosts skin hydration^{12,13†*}
- Strengthens hair & nail health^{14*}
- Supports joint health^{15,16*}

†95% of participants in these studies were female.

Where does the collagen in Orgain's products come from?

Most of the collagen peptides in Orgain's product line are derived from grass-fed, pasture-raised cattle, but we also offer a Marine Collagen option sourced from wild-caught Alaskan Pollock and a Multi Collagen option combining grass-fed bovine collagen, marine collagen, eggshell membrane collagen, chicken bone collagen and chicken bone broth. All the Orgain collagen products include collagen Type I & Type III. Multi collagen also is derived from Types II, V, and X.

Is there a vegan alternative for collagen peptides from animal sources?

At this time, the main sources of collagen are derived from animal and fish sources. Science continues to advance and there is evolving biotechnology to create vegan collagen through fermentation. This process involves genetic engineering to pair amino acids together molecularly identical to animal-derived collagen.²⁸ There is also potential to use algae as abundant vegan marine source of collagen.²⁷

What aids collagen synthesis?

Several nutrients are important for the natural production of collagen in the body. The most significant of these is vitamin C, which is a necessary cofactor in collagen synthesis.²⁹ It also functions as an antioxidant to combat oxidative stress that could otherwise degrade existing collagen.²⁹ Other relevant nutrients include copper and zinc which are additional cofactors in collagen production.^{30,31}

What are the recommendations for use?

Research suggests that a beneficial dose for collagen peptides supplementation may range from 2.5-20 grams per day.^{2,33,34,35} This can typically be achieved with one serving of an [Orgain Collagen](#) product. The benefits of collagen peptides for healthier skin may be apparent in as little as 4 weeks³² with routine supplementation.* Results for hair, nails and joints may take longer. For example, the benefits of collagen peptides for joint health with routine supplementation may be apparent over 3-6 months.^{15,16,26,36*}

What are the attributes of Orgain Collagen Peptide Products?

Orgain's collagen peptide line is subject to the same rigorous raw material approvals, formulation standards meeting Orgain's standards and Good Manufacturing Practices (GMP) as other trusted Orgain products. And as with our collagen products - everything we make is crafted from high-quality ingredients:

- Odorless⁺
- Soluble & easily dissolved
- Easy to mix in hot or cold liquids
- Made with Non-GMO ingredients[^]
- Made without dairy, gluten or soy ingredients
- No artificial flavors, colors or preservatives

⁺not including the [Chocolate Grass Fed Pasture Raised Collagen Peptides](#)

[^]not including [Plant Protein Plus Collagen](#)

Are there any precautions/contraindications?

If you are pregnant, nursing or have a medical condition, please consult with your treating healthcare provider before use.

Still have questions?

Consumers please reach out to us at info@orgain.com and healthcare professionals please reach out to us at medinfo@orgain.com and one of our registered dietitians would be happy to address your inquiries.
